Helping People & Businesses Profit from Northeast Shale Drilling

Cunningham's WV Lions Paw Pad Roars, Produces 100K Bbl of Oil

CLAY COUNTY | CUNNINGHAM ENERGY | ENERGY COMPANIES | WEST VIRGINIA

November 6, 2019

The Big Injun is back in the news. In 2015 Cunningham Energy, a small oil driller based in West Virginia, struck oil in the Big Injun sandstone formation in Clay County, WV (see [Cunningham Strikes Oil in West Virginia's Big Injun Territory](#)). In 2017 the company reported producing 20,000 barrels of oil from two new shallow horizontal oil wells located

in Clay County, targeting the Big Injun (see [Cunningham Energy Strikes More Oil in WV](#)). Cunningham drilled two more wells on the same pad, the Lions Paw pad, and as of this week that 4-well pad has surpassed producing a total of 100,000 barrels of oil and 91 million cubic feet (MMcf) of "wet" natural gas.
